

ABSTRACT

The UI/UX Design internship at Lunar IT Solution Pvt. Ltd. provided an enriching opportunity to explore the principles and practices of modern user interface and user experience design. During the internship, the intern worked on the Lunar IT Solution Website, focusing primarily on designing the mobile application interface for teachers. The project aimed to provide teachers with an intuitive and efficient platform for managing their academic activities, including viewing assigned classes, checking student information, managing attendance, accessing notifications, and managing profile and availability.

The internship involved understanding user requirements, analyzing teacher workflows, creating wireframes, designing high-fidelity mobile interfaces, and developing interactive prototypes using Figma. Particular attention was given to consistent visual hierarchy, typography, spacing, navigation, reusable UI components, and user-friendly interactions. The design process followed a user-centered approach to ensure that the interface was simple, clear, and suitable for teachers' daily tasks. The project also helped the intern understand the differences between teacher and student user roles within a Lunar IT Solution Website.

Overall, the internship at Lunar IT Solution Pvt. Ltd. strengthened the intern's practical knowledge of UI/UX design, Figma, prototyping, user-flow development, and mobile application design. It provided valuable exposure to real-world design practices and contributed significantly to the intern's professional growth in the field of UI/UX design.

Keywords: *Figma, Lunar IT Solution Website, Mobile Application Design, Prototyping, UI/UX Design, User-Centered Design, Wireframing*

- Applying UI/UX principles such as grids systems, typography, color hierarchy, Auto Layout, and design system components
- Collaborating closely with a peer designer to brainstorm design systems, divide web page modules, and align on cohesive UI decisions.
- Refining interface layouts based on mentor evaluations, design reviews, and continuous feedback loops.

Limitations:

- The internship mainly focused on UI/UX design, with limited involvement in the actual development and implementation of the application.
- Time constraints restricted extensive user testing with external end-users.
- Primary design efforts were centered on specific public-facing and onboarding user flows of the website rather than backend administrative management portals.
- Design decisions relied primarily on provided corporate specifications, peer collaboration, and mentor guidance rather than large-scale market research.

1.4 Report Organization

This internship report is organized into the following sections:

Chapter 1: Introduction

Provides an overview of the internship, including the problem statement, objectives scope and limitations, and organization of the report.

Chapter 2: Introduction to Organization

Introduces Lunar IT Solution Pvt. Ltd, the organization where the internship took place. This section includes details about the company, its organizational structure, working areas, and an overview of the intern department/unit.

Chapter 3: Background Study and Literature Review

Discusses fundamental concepts, principles, tools, and terminologies related to UI/UX design, including Figma, wireframing, prototyping, color theory, grids, Auto Layout, and mobile application design. It also reviews related concepts and existing systems.

Chapter 4: Internship Activities

Describes the roles, responsibilities, and weekly activities undertaken during the internship. It presents the practical tasks completed using Figma and explains the design process of the Teacher Mobile Application developed as part of the Lunar IT Solution Website.

Chapter 5: Conclusion and Learning Outcomes

Summarizes the overall internship experience, major achievements, and skills gained during the internship. It also discusses the knowledge and practical experience gained in UI/UX design, Figma, mobile application design, wireframing, and prototyping, along with their relevance to future career development.

2.2 Organizational Hierarchy

Figure 1: Organizational Hierarchy of Lunar IT Solution

In our organization, the CEO holds the highest leadership position and bears ultimate responsibility for the company's direction and achievements. Directly beneath the CEO is the CTO, tasked with overseeing the development and maintenance of the company's entire web application, front-end and back-end systems along with the database. The front-end developer concentrates on crafting the design and functionality of the user interface, while the UI/UX developer works towards enhancing the user experience and usability of the application. Lastly, the intern serves as a junior member of the team, gaining practical experience and learning from senior developers. This hierarchical structure ensures a clear chain of command and delineation of responsibilities.

2.3 Working Domains of Organization

Lunar IT Solution Pvt. Ltd is a technology company, comprising skilled professionals in the fields of Computer Science and Information Technology. Our focus is on research and development to enhance the lives of individuals and businesses. Some common working domains of Lunar IT Solution Pvt. Ltd include:

Website Development: Lunar IT Solution Pvt. Ltd specialize in designing and developing stunning websites for businesses, facilitating their growth in the digital realm.

CHAPTER 3: LITERATURE REVIEW

3.1 Background Study

During my internship at **Lunar IT Solution Pvt. Ltd.**, I focused on UI/UX design using Figma as the primary design and prototyping tool. User Interface (UI) focuses on the visual presentation, typography, grid structure, and interactive components, while User Experience (UX) emphasizes usability, intuitive information architecture, and efficient user flows (Garrett, 2010). Human-centered design principles guided our work to keep user goals at the heart of design iterations.

I studied and implemented fundamental UI/UX concepts including grid systems, color theory, typography scale, spacing rules, alignment, component grouping, and Auto Layout. These concepts enabled the creation of clean, visually balanced web layouts. Figma's collaborative capabilities, design systems, and reusable components were essential when co-designing pages alongside my project partner to maintain unified style standards across the site (Tidwell et al., 2020).

I also gained practical knowledge of wireframing and prototyping. Wireframes helped me plan the structure and layout of application screens before developing the final interface, while prototypes helped me represent screen navigation and user interactions. Figma provides tools for creating both wireframes and interactive prototypes within the design workflow (Figma Inc., 2030; Norman, 2002).

The knowledge gained during the internship was applied to the **Lunar IT Solution Website**, where I was primarily responsible for designing key web pages and user flows, including the Landing Page, Gallery Page, Internship Page, Enrolled Page, and Login Page. Working in close collaboration with my project partner, this background study provided me with the necessary theoretical and practical foundation to create user-friendly, responsive, and visually consistent web application interfaces.

3.2 Literature Review

Norman (2002) stresses the importance of human-centered design in making digital tools intuitive. Interfaces must clearly convey affordances, provide immediate feedback, and lower cognitive load. These principles directly informed the visual architecture of the website's main navigation, landing call-to-action buttons, and user login forms.

Nielsen (1994) introduced ten usability heuristics, including consistency, visibility of system status, error prevention, and recognition over recall. Applying these heuristics ensured consistent layout structures, uniform color coding, and predictable user flows across all website pages.

Krug (2014) advocates for effortless web navigation, arguing that users should navigate pages without confusion ("Don't Make Me Think"). This principle guided the structural design of the Landing Page, Gallery, and Enrollment sections, ensuring clear typographic hierarchy and intuitive visual flow.

Figma provides an integrated web platform for wireframing, design systems, real-time co-design, and interactive prototyping (Figma Inc., 2030; Norman, 2002). Using Figma enabled seamless peer collaboration, swift design revisions based on feedback, and accurate prototype creation for the complete web project.

Overall, the reviewed concepts and design principles provided a theoretical foundation for designing the Teacher Mobile Application. The literature helped guide decisions related to usability, navigation, consistency, visual organization, wireframing, and prototyping throughout the project.

fidelity designs using Figma, with attention given to typography, color palettes, spacing, buttons, cards, grids, navigation components, and overall visual consistency. Interactive prototyping was also used to demonstrate the connections between different screens and to test the navigation flow before finalizing the designs.

Overall, the project provided practical experience in understanding user requirements, developing user flows, creating wireframes, designing responsive web interfaces, maintaining reusable and consistent UI components, and developing interactive prototypes in Figma. The project also involved establishing smooth navigation pathways between different sections through connected header menus, breadcrumbs, modal popups, and strategic button linkages. The overall focus was to create a professional, user-friendly, and cohesive website that effectively represents Lunar IT Solution while providing a simple and efficient experience for its users.

4.4 Activities Performed

During the internship, the following activities were performed as part of the UI/UX design of the Website for the Lunar IT Solution Website:

- Requirement Analysis & Brainstorming: Analyzed company requirements along with my peer intern to map out site architecture and user roles.
- User Flow Mapping: Planned the step-by-step navigation paths for general visitors, prospective interns, and enrolled students.
- Low-Fidelity Wireframe: Sketched layout structures to organize content hierarchy before visual styling.
- High-Fidelity Web UI Design: Created responsive desktop designs in Figma focusing on visual hierarchy, typography scales, Auto Layout spacing, and brand color consistency.
- Interactive Prototyping: Linked screens in Figma to demonstrate header navigation, tab switching, login transitions, and button interactions.

- Design Refinement: Reviewed the designs and improved consistency, usability, alignment, and visual appearance based on feedback.

These activities provided practical experience in applying UI/UX design principles to a real-world Lunar IT Solution Website.

CHAPTER 5: CONCLUSION AND LEARNING OUTCOMES

5.1 Conclusion

The UI/UX Design internship at Lunar IT Solution Pvt. Ltd. was an exceptionally valuable learning experience. Working on the **Lunar IT Solution Official Website**—specifically designing the Landing Page, Gallery Page, Internship Page, Enrolled Page, Login Page, and key user flows—provided practical insights into professional web design methodologies.

Collaborating closely with a peer designer and receiving continuous mentor feedback demonstrated how team-based co-design converts business goals into polished, user-friendly digital products. The experience successfully bridged academic concepts with professional UI/UX practice.

Overall, the internship was a valuable learning experience that strengthened the intern's UI/UX design skills and provided a better understanding of the design process used in real-world software projects.

5.2 Learning Outcomes

Through this 8-week internship scheme, several key technical and soft skills were acquired:

Technical Skills:

- **Advanced Figma Proficiency:** Mastered Auto Layout constraints, multi-page component libraries, responsive grid setups, and smart prototyping interactions.
- **Web UI/UX Principles:** Practical application of human-centered design, Nielsen's heuristics, visual balance, color theory, and typographic hierarchy.
- **Web User Flow Architecture:** Skilled in planning logical navigation paths, onboarding journeys, and interactive state changes.
- **Design Systems & Consistency:** Building reusable UI components (navbars, footers, buttons, cards, form inputs) to maintain style uniformity.
- **Responsive Web Design:** Designed layouts that adapt to different screen sizes and devices.

Soft Skills & Teamwork:

- **Collaborative Co-Designing:** Effectively dividing design tasks, aligning on visual tokens, and co-creating with a peer intern.
- **Feedback Integration:** Receiving constructive critique during design reviews and iteratively improving UI quality.
- **Web User Flow Architecture:** Articulating design decisions clearly and delivering assigned web modules within project deadlines.
